ABOUT ME

I am an industrial designer, with experience in product development and implementation. Currently, I work for the 'Ministry of Health, Government of the Province of Córdoba', in the infrastructure department. In this role, I participate in the design of various medical products to be implemented in public hospitals. I am also responsible for creating and testing the documentation for the different applications and software used in monitoring (currently Zabbix), where I make sure that the documentation created is intuitive and easy to understand. I also give support doing some tasks that require graphic design such as logo design, advertisements, alert screens, etc. Additionally, I provide general support in the monitoring and resolution of various incidents.
